

Pollination Rental Checklist ■

Blog: ToAgriculture.com

Before Bloom (4–6 Weeks Out)

- Plan pollination needs by crop & bloom window
- Contact local beekeepers & finalize hive numbers
- Draft a simple rental agreement covering colony strength, payment, and pesticide safety
- Map hive locations & prepare access points

At Hive Arrival

- Verify colony strength (5–6 brood frames minimum)
- Place hives evenly across the field
- Provide a clean water source nearby

During Bloom

- Monitor bee activity daily
- Communicate with beekeepers about spray schedules
- Keep pesticide drift under control

After Bloom

- Remove hives as agreed
- Settle payments and inspect hives for damage
